

REVISED PRODUCT LIST

VERSION 2.0

WITH EFFECT FROM APRIL
2025

ABOUT US

ABPL Bearings, with over 25 years of industry experience, officially began its journey in 2017. As a trusted name in the industrial bearings sector, we are dedicated to delivering high-quality products at competitive prices. Our company operates with a team of skilled professionals who have an in-depth understanding of customer requirements, ensuring timely fulfilment with cost-effective solutions.

We proudly serve a diverse range of manufacturing industries, including rolling mills, paper mills, stone crusher plants, power plants, cement plants, wind energy farms, and steel industries, among others. Our commitment to excellence and customer satisfaction drives us to provide reliable, high-performance bearings that meet the highest industry standards. With a focus on quality, innovation, and reliability, we continue to be a preferred choice in the industrial bearings market across India.

UNDERSTANDING INTERNAL CLEARANCE

Internal clearance in bearings refers to the measurable movement between the inner and outer rings when no external force is applied. This movement can be radial (side-to-side) or axial (front-to-back). Standardized clearance values ensure bearings perform optimally under different operating conditions.

CLEARANCE CLASSIFICATIONS

CLEARANCE CLASS	DESCRIPTION
C1	Tighter than C2, suitable for precision applications.
C2	Less than standard clearance, used where minimal movement is critical.
Normal (no suffix)	Standard clearance for general use.
C3	Greater than normal, ideal for high-temperature or interference-fit scenarios.
C4	Greater than C3, for heavy interference fits.
C5	Greatest clearance, used in extreme thermal expansion cases.

WHY CLEARANCE MATTERS?

1. Interference Fits: When bearings are pressed onto shafts, the inner ring expands, reducing clearance. Pre-selecting the right clearance prevents binding.
2. Thermal Expansion: Heat causes metal parts to expand. Extra clearance compensates for uneven expansion during operation.

KEY RECOMENDATIONS:

When uncertain, opt for bearings with higher clearance (e.g., C3 over Normal).

Match clearance to application demands—precision machinery may need C2, while industrial equipment often requires C3 or C4.

BEARING SUPPLEMENTARY CODES

- MB Machined brass cage, split type - provides strength and durability
- CA Machined brass cage, one-piece - offers stability for high-speed applications
- C Steel cage - economical option for general use
- W No re-lubrication facility - sealed for life
- W33 Lubrication groove and three holes in outer ring - for easy regreasing
- K Tapered bore (1:12 ratio) - for secure mounting on tapered shafts
- K30 Tapered bore (1:30 ratio) - alternative taper for specific applications
- EX Explorer series - premium quality bearings

WHY BEARINGS BREAKS?

In general bearings have a long life in ideal environment, what makes the environment hostile are what breaks a bearing. One should always be aware and have knowledge of how to handle a bearing and how to take care of it for maximum usability. Breakdown of a roller bearing must be determined to avoid any future mishappens. The major factors contributing to the failure of bearings during service include incorrect mounting, excessive loading, inadequate & insufficient lubrication, impact loading, vibrations, contamination, entry of harmful liquids. It is difficult to determine the root cause of some of the premature failures. If all the conditions at the time of failure, and prior to the time of failure are known, including the application, operating conditions and environment, then by studying the nature of failure and its probable causes, the possibility of similar future failures can be reduced.

DO'S AND DON'T WHILE HANDLING A BEARING

Do's (क्या करें)

Store Bearings Properly – Keep them in a clean, dry place away from moisture and contaminants.

बेयरिंग्स को सही तरीके से स्टोर करें – इन्हें साफ, सूखी जगह पर नमी और गंदगी से दूर रखें।

Handle with Care – Use gloves to avoid contamination from dirt and oil.

सावधानी से संभालें – गंदगी और तेल से बचने के लिए दस्ताने का उपयोग करें।

Ensure Proper Lubrication – Use the right type and amount of lubricant to reduce wear and friction.

सही स्नेहन सुनिश्चित करें – सही प्रकार और मात्रा में स्नेहक का उपयोग करें।

Install Bearings Correctly – Follow manufacturer guidelines for correct fitting and alignment.

बेयरिंग्स को सही तरीके से स्थापित करें – निर्माता के दिशानिर्देशों का पालन करें।

Regular Maintenance – Periodically inspect for wear, misalignment, and lubrication levels.

नियमित रखरखाव करें – समय-समय पर पहनाव, गलत संरेखण और स्नेहन स्तरों की जांच करें।

Don'ts (क्या न करें)

Avoid Contaminants – Keep dust, water, and debris away from bearings to prevent damage.

गंदगी और धूल से बचें – बेयरिंग को गंदगी, पानी और मलबे से दूर रखें।

Do Not Use a Hammer for Installation – Always use a press or proper tools to fit bearings.

हथौड़े का उपयोग न करें – हमेशा प्रेस या सही उपकरणों का उपयोग करें।

Never Mix Lubricants – Different lubricants may not be compatible and can cause bearing failure.

स्नेहकों को कभी न मिलाएं – अलग-अलग स्नेहक संगत नहीं हो सकते और बेयरिंग की विफलता का कारण बन सकते हैं।

Do Not Spin Bearings Dry – Always ensure bearings are properly lubricated before use.

सूखी अवस्था में बेयरिंग को न घुमाएं – उपयोग से पहले सही तरीके से स्नेहित करें।

Do Not Ignore Warning Signs – Unusual noise, vibration, or overheating could indicate a bearing issue.

चेतावनी संकेतों की उपेक्षा न करें – असामान्य आवाज, कंपन या अत्यधिक गर्मी समस्या का संकेत हो सकते हैं।
